### Direct interfacing of Cells with Microelectronics

**Prof. Andreas Hierlemann**

ETH Zurich  
Department of Biosystems Science and Engineering □  
Bio Engineering Laboratory (BEL)  
Basel

**Vendredi 28 mai 2010 à 15 Heures  
Auditorium de l'IPCMS**

Microfabrication techniques and, in particular, CMOS technology have been used to devise bioelectronic microsystems. CMOS-based, fully integrated microelectrode arrays for bidirectional communication (stimulation and recording) with electrogenic cells, such as heart cells and neurons, will be presented. These devices are capable of monitoring relevant electrophysiological responses of cells to electrical stimuli or to pharmacological agents with prospective applications in the field of bio-inspired information processing or pharmascreening.
